## **AES Awarded Contract from Desbuild, Inc.**

PEABODY, MA, November 11, 2005- AES Corporation reported today that their Technical Services Division has been awarded a new firm-fixed price contract. AES will provide logistical and installation services for all technical security requirements in support of Desbuild, Inc.'s upgrade project for the US Consulate in Hermosillo, Mexico. Desbuild was recently awarded this project by the State Department's Office of Overseas Building Operations.

Although this is our first award from Desbuild, we have worked proactively with them on previous overseas projects, says Mark Trimble, Director of Operations. Our team members worked exceptionally well together in New Delhi, India. We expect this project to run smoothly. "

In line with the division's long-term growth strategy, and following a recent internal reorganization, this award represents AES' first from Desbuild. This contract is important to us, explains George Ullrich, CEO of AES International Operations, because it affords us the opportunity to demonstrate to a new partner our exceptional workmanship and our ability to complete projects both on-time and on-budget. "

For more information please contact Jeannie Carpenter via email at [jcarpenter@aes-intellinet.com](mailto:jcarpenter@aes-intellinet.com) or visit our website at [www.aes-tss.com](http://www.aes-tss.com). For more information about Desbuild, Inc., of Hyattsville, Maryland, please visit their website at [www.desbuild.com](http://www.desbuild.com).

### **About AES Corporation**

Established in 1974, AES Corporation is a small, woman-owned business that has, through their Technical Services division, consistently and successfully delivered turnkey security design, installation and integration solutions for facilities, worldwide. Our experienced professionals are cleared Top Secret and we maintain a Top Secret facility clearance. Our services include the complete design, procurement, installation, testing, documentation, and training of physical security systems and command centers. AES also offer site surveys, project/program management, vulnerability analysis, security system analysis, security system design (CAD), and the installation/integration of physical security equipment such as CCTV, WTMDs, bomb detection, biometrics, intrusion detection, active/passive protection systems, badging systems, cabling, electrical infrastructure, telecommunications, and data communications (CAT6 and Fiber Optic). Corporate accomplishments include successful project completions in more than 130 countries.
